

# **Model Number**

**NJ2-V3-N** 

# **Features**

- 2 mm flush
- Usable up to SIL 2 acc. to IEC 61508

# **Technical Data** General specifications

Switching function		Normally closed (NC)
Output type		NAMUR
Rated operating distance	s <sub>n</sub>	2 mm
Installation		flush

Assured operating distance Reduction factor r<sub>Al</sub> 0 ... 1.62 mm 0.25 0.2 Reduction factor r<sub>Cu</sub> Reduction factor r<sub>304</sub>

Nominal ratings  $8.2~V~(R_i~approx.~1~k\Omega)$  0 ... 1000 Hz 0.01 ... 0.1 mm Nominal voltage Switching frequency

Hysteresis Suitable for 2:1 technology yes , Reverse polarity protection diode not required

Current consumption Measuring plate not detected  $\geq$  3 mA Measuring plate detected ≤ 1 mA

**Ambient conditions** -25 ... 100 °C (-13 ... 212 °F)

Ambient temperature **Mechanical specifications** 

Connection type cable PVC, 130 mm Core cross-section 0.14 mm<sup>2</sup> Housing material Sensing face PBT

PBT Degree of protection IP67 Cable

> 10 x cable diameter Bending radius

EN 60079-0:2012+A11:2013 EN 60079-11:2012

Ignition protection "Intrinsic safety"
Use is restricted to the following stated conditions

 $\leq$  40 nF; a cable length of 10 m is considered.

 $\leq$  50  $\mu$ H; a cable length of 10 m is considered.

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual. The EU-type examination certificate has to be observed. The special conditions must be adhered to! Directive 94/9/EC and therefore the EC-type-examination certificates generally apply only to the use of electrical apparatus under atmospheric conditions. The device has been checked for suitability for use at ambient temperatures of > 60 °C by the named certification authority. The surface temperature of the device remains within the required limits. If the equipment is not used under atmospheric conditions, a reduction of the permissible minimum ignition energies may have to be taken into consideration

Details of the correlation between the type of circuit connected, the maximum permissible ambient temperature, the temperature class, and the effective internal reactance values can be found on the EC-type examination certificate. Note: Use the temperature table for category 1  ${\tt !!!}$  The 20 % reduction in accordance with EN 1127-1 has already been applied to the temperature table for category 1.

Laws and/or regulations and standards governing the use or intended usage goal must be observed. The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety. The associated apparatus must satisfy the requirements of category ia.

Due to the possible danger of ignition, which can arise due to faults and/or transient currents in the equipotential bonding system, galvanic isolation of the power supply and signal circuit is preferable. Associated apparatus without electrical isolation must only be used if the appropriate requirements of IEC 60079-14 are met. Install the device in such a way that the resin surface is not exposed to mechanical hazards. If the Ex-related marking is printed only on the supplied label, then this must be attached in the immediate vicinity of the sensor. The sticking surface for the label must be clean and free from grease. The attached label must be legible and indelible, including in the event of possible chemical corrosion

No changes can be made to apparatus, which are operated in hazardous areas. Repairs to these apparatus are not possible

The connecting parts of the sensor must be set up in such a way that degree of protection IP20, in accordance with IEC 60529, is achieved as a minimum.

When using the device in a temperature range of -60 °C to -20 °C, protect the sensor against the effects of impact by installing an additional enclosure. The information regarding the minimum ambient temperature for the sensor as provided in the datasheet must also be observed.

Additional requirements for gas group IIC. Information on electrostatic hazards can be found in the technical specification IEC/TS 60079-32-1. Avoid electrostatic charges that can cause electrostatic discharge when installing or operating the device

NJ 2-V3-N ...

 $\leq$  40 nF; a cable length of 10 m is considered.

≤ 50 µH; a cable length of 10 m is considered.

The apparatus has to be operated according to the appropriate data in the data sheet and in this instruction manual. The EU-type examination certificate has to be observed. The special conditions must be adhered to! The ATEX directive and therefore the EU-type examination certificates are in general only applicable to the use of electrical apparatus operating at atmospheric conditions.

The use in ambient temperatures of > 60 °C was tested with regard to hot surfaces

by the mentioned certification authority.

If the equipment is not used under atmospheric conditions, a reduction of the permissible minimum ignition energies may have to be taken into consideration

Details of the correlation between the type of circuit connected, the maximum permissible ambient temperature, the surface temperature, and the effective internal reactance values can be found on the EC-type-examination certificate. The maximum permissible ambient temperature of the data sheet must be noted, in addition, the lower of the two values must be maintained.

Laws and/or regulations and standards governing the use or intended usage goal must be observed. The intrinsic safety is only assured in connection with an appropriate related apparatus and according to the proof of intrinsic safety. If the Ex-related marking is printed only on the supplied label, then this must be attached in the immediate vicinity of the sensor. The sticking surface for the label must be clean and free from grease. The attached label must be legible and indelible, including in the event of possible chemical corrosion.
