

## TNM® 834 Controller

### Description

The Siemens TNM® 834 is a compact, embedded IoT (Internet of Things) controller bundled from a special licensed TNM-8000 and an IO-R-34 remote 34 IO module for smaller applications and plant control. Based on the TNM-8000 it includes Internet connectivity and Web serving capability providing integrated control, supervision, data logging, alarming, scheduling and network management. It streams data and rich graphical displays to a standard Web browser via an Ethernet or wireless LAN, or remotely over the Internet.

### Features

The licensing model for the TNM 834 controller is simplified and features standard drivers.

- Special licensing allows 0 to 5 device licenses and increments of 1 device.
- Bundle includes one TNM-834 (TNM-8000 with special license) and one IO-R-34 module.
- Operates with Niagara 4, the latest version of the Niagara Framework®, for optimum performance in larger facilities.
- Licensed for small systems and plant control.
- Niagara 4 Supervisors can be used with TNM 834 controllers to aggregate information, including real-time data, history and alarms, to create a single and unified application.

## Remote IO modules

Included with the TNM-834 is licensing for an 16 IO device count.

- 1 IO-R-16 = device count 1
- 1 IO-R-34 = device count 2 (one module included)

Therefore, the maximum Expansion is

- 7 IO-R-34 ((7+1) \* device count 2)  
or
- 14 IO-R-16 ((14+2)\* device count 1)  
or a combination
- E.g. 4 IO-R-34 and 8 IO-R-16 (4\* device count 2 + 8\* device count 1 = device count 16)
